EDUCATION

Savitribai Phule Pune University
Bachelor of Computer Applications (BCA)

Pune, India
Aug 2024 – July 2027

EXPERIENCE

Code B Solutions Pvt Ltd

Full Stack Developer Intern

Pune, India

March 2025

- Architected a Group Management Dashboard from scratch, enabling admins to create, update, and soft-delete groups without engineering intervention.
- Implemented real-time search and filtering over the group dataset, replacing full-page reloads with live client-side updates for faster admin lookups.
- Engineered dependency-validation checks into the soft-delete workflow, preventing orphaned records and preserving referential integrity across dependent tables.

Accenture Nordics Software Engineering Job Simulation (Forge, Virtual)

July 2025

- Applied Agile and DevOps practices to a simulated healthcare application, translating client requirements into sprint-ready technical tasks.
- Mapped IaaS/PaaS cloud architecture options against the simulated system's scaling and cost constraints.
- Integrated NIST and IAM security controls into the SDLC, addressing authentication and access-control gaps identified during the simulation.

TECHNICAL PROJECTS

Arabian Bites Multi-Tenant SaaS Restaurant POS | Java, Spring Boot, Spring Security, MySQL, React, AWS, Twilio

- Built and shipped 29 REST controllers solo, covering the full order-to-billing lifecycle for QR ordering, kitchen management, inventory, and loyalty across a multi-tenant restaurant platform.
- Replaced polling-based status checks with event-driven WebSocket (STOMP/SockJS) channels, pushing live order and kitchen updates instantly to 6 distinct user roles.
- Designed a 6-role RBAC hierarchy secured with JWT, BCrypt, and TOTP-based 2FA (with recovery codes) plus Twilio SMS OTP login, enforcing endpoint-level access control tenant-wide.
- Isolated tenant data using a ThreadLocal-based TenantContext that scopes every database query and WebSocket channel to the authenticated tenant, enabling secure onboarding of independent restaurants on one deployment.
- Automated 3 recurring operational workflows daily P&L email reports, cashback expiry processing, and idle table-session cleanup via scheduled cron jobs, removing the need for manual daily reconciliation.

AI-Powered RAG Chatbot Document Q&A Platform | Spring Boot, Spring AI, Java 21, PostgreSQL/PGVector, React, JWT

- Built a document ingestion and embedding pipeline using NVIDIA NIM embeddings with PostgreSQL/PGVector as the vector store, enabling semantic similarity search over user-uploaded documents.
- Streamed model responses token-by-token via Server-Sent Events (SSE) from the Spring Boot backend to a React 19 + Vite frontend, replacing full-response wait times with incremental output.
- Tuned system prompts and tokenization limits to fit retrieved context within the model's context window while preserving answer relevance.
- Secured all chat and ingestion endpoints with JWT-based Spring Security authentication and Bucket4j rate limiting to prevent abuse.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript

Backend: Spring Boot, Spring Security, Spring AI, REST APIs, JWT, WebSocket (STOMP), Redis, Bucket4j, Microservices Basics

Frontend: React, Responsive UI Development

Databases: MySQL, PostgreSQL (PGVector), MongoDB

Cloud & Tools: AWS (EC2, S3, RDS, CloudFront), Vercel, Git, GitHub, Docker, IntelliJ IDEA, VS Code

CERTIFICATIONS

- Master in Full Stack Web Development with Java
- TCS iON Career Edge - Young Professional
- Accenture Forge Software Engineering Job Simulation
